

	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Total VBAC candidates	743	784	793	793	905	798	807	748	756	760
Labour or induction attempt	65.4%	63.0%	63.9%	65.2%	62.1%	53.8%	56.4%	55.7%	57.7%	60.8%
No labour and no induction attempt	34.6%	37.0%	36.1%	34.8%	37.9%	46.2%	43.6%	44.3%	42.3%	39.2%

Note: For the purposes of this report, a candidate for vaginal birth after Caesarean (VBAC) is woman who has had no more than one previous Caesarean section delivery; whose current pregnancy is a singleton in vertex presentation; and who has no contraindications for labour. On an individual basis when more information is available, such as type of previous Caesarean delivery, other factors are taken into account and women with two previous Caesarean deliveries may be considered for VBAC. [Ref: Society of Obstetricians and Gynaecologists of Canada. Guidelines for vaginal birth after previous caesarean birth. SOGC clinical practice guidelines. Number 155, February 2005. International Journal of Gynaecology and Obstetrics 2005;89(3):319-31].
